

Product Description VaporBarrier

Our offer includes VaporBarrier foil in two variants: basic foil - clean, and self-adhesive foil. The VaporBarrier foil and tape consists of three layers: 12 μ polyester foil, 25 μ aluminum foil, 12 μ polyester foil. The self-adhesive variant uses acrylic glue. A large temperature range from -65°C to + 150°C allows for a very wide range of applications. The main place of application are insulation systems in the environment of negative and positive temperatures. The main task is to prevent the ingress of moisture into the insulation and to reduce thermal radiation by more than 95%.

Flexible foil conforms perfectly to curved or irregular shapes. Very easy on-site installation without any special tools or training.

Available widths for both variants: 60 mm, 1000 mm, 1500 mm. The product is delivered in rolls. The goods are in our warehouse in Gdynia, which means that the shipment is carried out in a very short time. We provide free samples of goods to companies interested in purchasing.
